## **What we have been learning:**

English: Sadly, our information text took longer than anticipated however, the children have written some fantastic information, applying technical language and previous learning.

Maths: Now that we have officially finished our learning of shapes, completing this area with comparisons between prisms and pyramids, the children have progressed onto measurement. We have looked at different lengths, the tools we would use to measure this and which units of measurement would be needed for differing lengths.

Project 1: How can we make our school more beautiful?

We have finally built our bird houses and bug hotels. The children have loved this project and felt incredibly proud to know they are supporting our local wildlife around our school. Fingers crossed our lovely little bugs and birds will start to use them.

Next Week:

We will be looking at plant life and how to keep our plants and bodies healthy. In Maths, we will be looking at capacity and weight and solving problems across the maths curriculum for year 3. In the final week, the children have the chance to write their own Iron Man story.
