

DIAMOND CLASS NEWSLETTER

3rd March 2017

This week:

Thank you to everyone who supported Diamond Class with sponsorship for our dodgeball event. Miss Pursey had worked hard at making it a really exciting day for the whole school. In the morning, Diamond and Crystal Classes joined together to learn the rules of Dodgeball and practise essential skills like accurate throwing and moving. The tournament in the afternoon was very competitive and Diamond Class rose to the occasion by becoming the winning class. Over the coming weeks, we hope develop our skills even more by playing more dodgeball.

Science: Our scientific enquiry is, **“How can we prove that water has three states of matter?”**

Children have been busy using their collaborative skills by working in groups to plan out an investigation to prove this question. They have been thinking like scientists by discussing how they will make their testing fair and which variables they could change. This has led to some very in depth discussions and we look forward to practically investigating our predictions next week.

Next week:

Maths: We will be focussing on place value especially decimals. In order to prepare the children for their learning next week, I have set decimal tasks on Mathletics and the children may well need some support with this. Please continue practising times tables as we will be doing a check.

English: I will be sending a spelling investigation home again next week and the children can bring this in whenever they complete it.

Mrs Moncrieff
