Diamond Class

Our learning:

## Computing

Following on from the Aardman workshop, we wanted to animate our models using the software package "Zu3D". We had already explored animation using the Learnpads and moveable pictures on a background so our next step was 3D animation .

We had great fun creating our own scenarios, taking several pictures to slow down our character's movements and even adding in some sound effects ! The children have now taken these models home to make up their very own animations over the half term holiday .

## Cross Curricular Maths and Science

We have continued to explore food chains in more depth and have linked this into learning how to organise information on a Carroll Diagram .The children have been super curious too and have posed some interesting questions like :

" If a toad is a carnivore does it have teeth?"

"How can a giant panda be an omnivore?"

"Do herbivores have any special adaptations compared to a carnivore ?"

Their independent research has led to them discovering some very interesting facts which I am sure they will happily share with you .

Reminders :

- Next week is "Timestables Challenges Week" and the children will be involved in applying their knowledge of multiplication facts. Please support your child in learning their target tables- thank you.

Mrs Moncrieff
