Robots

This week we have started to design the robots for our end of project showcase. We are designing robots with moving parts using pneumatics however they will not be able to move across the floor. Some children have asked if they can bring remote controlled cars in from home to build their robots on top of so they are able to move. I have said that I am happy for this if parents allow it. We will start building our robots next week so children can bring in remote controlled cars/toys from them if you are happy for them to be in school for the last few weeks of term. These are not essential, anyone without a remote controlled car will still be able to make a robot with a moving part.

Jigsaw

I have been so impressed with all the children's mature attitudes towards our Jigsaw unit 'Changing Me'. They have asked sensible questions and shared valuable contributions.

Have a lovely weekend
