What have we been learning?

Jet class had the most amazing trip last week to 'We the curious' developing our space learning. We participated in lots of space themed activities including rocket launching, exploring materials for a space suit, gravity ping pong ball races and mending space shuttle solar panels!!

We loved the planetarium 3D show 'Are we alone?' which took us on a journey to space to see if there were any other life forms. It was amazing.

A big thank you to all our parent volunteers for coming with us, we hope you enjoyed it as much as we did.

This week in english we have been writing detailed recounts of our trip using time connectives and co ordinating conjunctions to extend our sentences.

In science we have been thinking about the suitability of materials depending on their properties to help NASA decide on the best material to use to build their next space shuttle.

Next Week

In maths we will be applying our place value and number knowledge to solve worded space problems.

In Science we will be carrying out a scientific experiment investigating materials called Astro nappy!!!

Important information

Please can we ask all parents to check that you have the correct jumpers/cardigans at home as a few named items have gone missing

Your child has been allocated a book on bug club that they have been reading during guided reading, please support your child to answer the bugs. They have also been allocated an extra bug club book this week.
